

### Department of CSE Autonomous Institute, Affiliated to VTU

### PROPOSED COURSE PLAN

Academic Year	September- December 2020	Sem	5th	Section(s)	A, B, C
Faculty Name:	Namratha M				
Course Title:	Advanced Data Structures				
Course Code:	20CS5PEADS				
L-T-P:	2-0-1	<b>Total Credits:</b>	03		

A	Cours	Course Outcomes														
	At the end of the course the student will be able to															
	CO1 Ability to <b>analyze</b> the usage of appropriate data structure for a given application.  CO2 Ability to <b>design</b> an efficient algorithm for performing operations on various advances arructures.															
									dvanced	l data						
	CO	)3						e of ha								
	Ability to <b>conduct</b> practical experiments to solve problems using an appropriate data structure.															
В	СО-Р	O-PSC	) map	ping												
		PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3
	CO1		1													
	CO2			3												3
	CO3	2														
	CO4				3											
C	Indica Propo															
	Proposed Assessment Plan (for 50 marks of CIE)															
			T	ool				Remarks					Ma	rks		
			Inte	ernals					Best 2	out o	f 3			2	0	
	Qu	Quiz-1, Quiz-2 (5 Marks Each) Lab Component										-				
						2 lab test (15 marks each) + Continuous evaluation (10 marks)				25						
	Self-Study Component									-	-					
			A	AT					C	NE				0		
	Tota				otal	al				50						

# Department of CSE

### Autonomous Institute, Affiliated to VTU

Unit #	Lecture#	Topics Covered	Rem
	1	Disjoint Sets Basic Data Structure, Smart Union algorithms	
	2	Path Compression, Time complexity for Union-by-Rank and Time complexity for Path compression, Applications.	
UNIT 1	3	Advanced Lists	
	4	Generic Linked List, Memory efficient doubly linked list  XOR Linked List, Skip List	+
	5	Self Organizing List, Unrolled Linked List.	
	6	Trees	
		AVL Trees-Construction, Insertion, Rotation, Deletion operations	
	7	Splay Trees, 2-3 Trees-Construction	
UNIT 2	8	2-3 Trees Insertion and Deletion operations	
	9	B-Trees- Construction, Insertion and Deletion operations	
	10	Red-Black Trees- Construction, Insertion and Deletion operations.	
	11	Applications of Red-Black Trees	
	12	Trees and Advanced Lists	
		Trie, Suffix Array Tree	
UNIT 3	13	Segment Tree	
	14	Splay Goat Tree	
	15	K-Dimensional Tree	
	16	Binary Indexed Tree or Fenwick Tree	
	17	Hashing Collision Resolution Techniques: Hash Tables without Linked Lists	
UNIT 4	18	Quadratic probing, Double hashing	
	19	Rehashing	
	20	Extendible Hashing. Applications of Hashing.	
	21	Heaps	
IINITE	22	Binomial trees and Binomial heaps Operations on binomial heaps	
UNIT-5	23	Operations on binomial heaps continued	
	24	Structure of Fibonacci Heaps	

### Department of CSE

### Autonomous Institute, Affiliated to VTU

		25	Mergeable heap operations	
		26	Decreasing a key and deleting a node.	
۱.	•			

Prescrib	Prescribed Text Book									
Sl. No.	Book Title	Authors	Edition	Publisher	Year					
1	Introduction to Algorithms	T. H Cormen, C. E. Leiserson and R. L. Rivest	2 <sup>nd</sup> Edition	Prentice Hall India	2001					
2	Data Structures and algorithm analysis in C++	Marks Allen Wesis	3 <sup>rd</sup> Edition	Pearson Education	2014

E Proposed Tutorial Plan (if applicable)

#### F Proposed Laboratory Plan (if applicable)

**Note:** The faculty handling the course (of all sections) should discuss and prepare four open-ended question (applications based on the topics covered in the theory class for each unit). The continuous evaluation for the lab is done as follows:

## Department of CSE

### Autonomous Institute, Affiliated to VTU

□ 10 marks for each lab program and 10 marks for	open-ended questions.
--	-----------------------

 $\Box$  Final continuous evaluation marks will be calculated for 10 marks: (10 marks lab programs + 10 marks open-ended)/2

**Lab Test-1:** 15 marks for test-1 + 10 marks: Average of first 5 lab programs + 2 application implementation of the open ended question set

**Lab Test-2:** 15 marks for test-2 + 10 marks:

Average of last 5 programs + 2 application implementation of the open ended question set.

Sl.No	Program	Unit				
1	Write a program to implement the following list:	UNIT 1				
	An ordinary Doubly Linked List requires space for two address fields to store the addresses of previous and next nodes. A memory efficient version of Doubly Linked List can be created using only one space for address field with every node. This memory efficient Doubly Linked List is called XOR Linked List or Memory Efficient as the list uses bitwise XOR operation to save space for one address. In the XOR linked list, instead of storing actual memory addresses, every node stores the XOR of addresses of previous and next nodes.					
2	Write a program to perform insertion, deletion and searching operations on a skip list.	UNIT 1				
3	Given a boolean 2D matrix, find the number of islands.	UNIT 1				
	A group of connected 1s forms an island. For example, the below matrix contains 5 islands					
	{1, 1, 0, 0, 0},					
	{0, 1, 0, 0, 1},					
	{1, 0, 0, 1, 1},					
	{0, 0, 0, 0, 0},					
	{1, 0, 1, 0, 1}					
	A cell in the 2D matrix can be connected to 8 neighbours.					
	Use disjoint sets to implement the above scenario.					
4	Write a program to perform insertion and deletion operations on AVL trees.	UNIT 2				
5	Write a program to perform insertion and deletion operations on 2-3 trees.	UNIT 2				
6	Write a program to implement insertion operation on a red black tree. During insertion, appropriately show how recolouring or rotation operation is used.	UNIT 2				
7	Write a program to implement insertion operation on a B-tree.	UNIT 2				
8	Write a program to to implement functions of Dictionary using Hashing.	UNIT 3				
9	Write a program to implement the following functions on a Binomial heap:	UNIT 5				
	1. <b>insert(H, k):</b> Inserts a key 'k' to Binomial Heap 'H'. This operation					

### Department of CSE

### Autonomous Institute, Affiliated to VTU

and the new Binomial heap.  2. getMin(H): A simple way to getMin() is to traverse the list of root of Binomial Trees and return the minimum key.  3. extractMin(H): This operation also uses union(). We first call getMin() to find the minimum key Binomial Tree, then we remove the node and create a new Binomial Heap by connecting all subtrees of the removed minimum node. Finally we call union() on H and the newly created Binomial Heap.  10 Write a program to implement the following functions on a Binomial heap:  1. delete(H): Like Binary Heap, delete operation first reduces the key to minus infinite, then calls extractMin().  2. decreaseKey(H): decreaseKey() is also similar to Binary Heap. We compare the decreases key with it parent and if parent's key is more, we sway keys and recur for parent. We stop when we either reach a node whose parent has smaller key or we hit the root node.  G Proposed Self-Study Plan (if applicable)  Plan:  Platform: HackerRank  4 questions (coding related) will be designed on HackerRank (1-EASY LEVEL, 2-MEDIUM LEVEL, 1-DIFFICULT LEVEL) will be framed and students are supposed to code within 2 hours of time. Average of questions will be considered for awarding the marks.  Students are supposed to come to the CSE lab and do the coding in front of batch-in-charges only.  I List the suggestions/Comments for improvement of the course (or similar course) delivered during the previous Academic year (as mentioned in the Course File)									
Binomial Trees and return the minimum key.  3. extractMin(H): This operation also uses union(). We first call getMin() to find the minimum key Binomial Tree, then we remove the node and create a new Binomial Heap by connecting all subtrees of the removed minimum node. Finally we call union() on H and the newly created Binomial Heap.  10 Write a program to implement the following functions on a Binomial heap:  1. delete(H): Like Binary Heap, delete operation first reduces the key to minus infinite, then calls extractMin().  2. decreaseKey(H): decreaseKey() is also similar to Binary Heap. We compare the decreases key with it parent and if parent's key is more, we swap keys and recur for parent. We stop when we either reach a node whose parent has smaller key or we hit the root node.  G. Proposed Self-Study Plan (if applicable)   H. Proposed Alternate Assessment Tool Plan (if applicable)  Plan:  Platform: HackerRank  4 questions (coding related) will be designed on HackerRank (1-EASY LEVEL, 2-MEDIUM LEVEL, 1-DIFFICULT LEVEL) will be framed and students are supposed to code within 2 hours of time. Average of questions will be considered for awarding the marks.  Students are supposed to come to the CSE lab and do the coding in front of batch-in-charges only.  1 List the suggestions/Comments for improvement of the course (or similar course) delivered during the previous Academic year (as mentioned in the Course File)  J. Proposed Action Plan to address the suggestions/Comments   This course has been introduced as an Elective course  CO# Attainment: CAYm1 Remarks  (Jan-May 2019)  CO1  CO2  CO3  CO4  Proposed innovations in TLP/Best Practices (delivery/assessment)									
3. extractMin(H): This operation also uses union(). We first call getMin() to find the minimum key Binomial Tree, then we remove the node and create a new Binomial Heap by connecting all subtrees of the removed minimum node. Finally we call union() on H and the newly created Binomial Heap.  10 Write a program to implement the following functions on a Binomial heap:  1. delete(H): Like Binary Heap, delete operation first reduces the key to minus infinite, then calls extractMin().  2. decreaseKey(M): decreaseKey() is also similar to Binary Heap. We compare the decreases key with it parent and if parent's key is more, we swap keys and recur for parent. We stop when we either reach a node whose parent has smaller key or we hit the root node.  G. Proposed Self-Study Plan (if applicable)  ———————————————————————————————————
